

## Project Costing

CCS Enterprise's Project Costing integrates budgets, costs and revenues of a project and presents them in the way you define. Tradition accounting approach takes only amount into consideration and requires lengthy chart-of-account. On the other hand, CCS Enterprise's Project Costing details on budget quantity, budget amount, WIP quantity, WIP amount, variance quantity and variance amount, allowing you to control the project from the very beginning.

Project Costing integrates the Purchasing, Work Orders, Inventory Control, Accounts Payable and Cash Book at the center and is one of the most powerful modules within the CCS Enterprise suite.

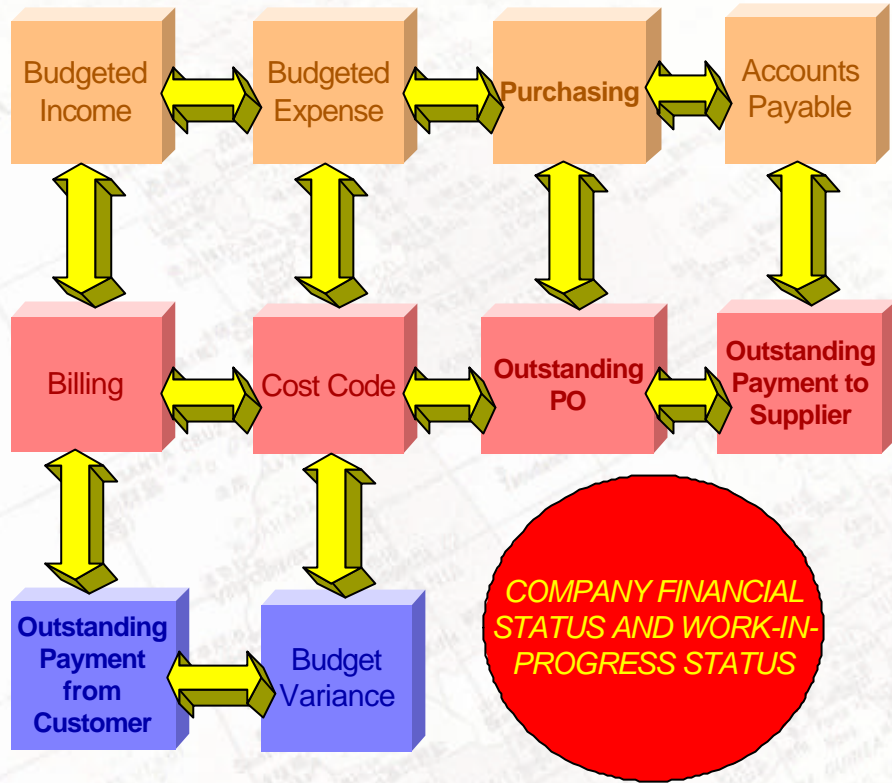

## Feature highlight

- ?? Purchase requisition, purchase order and work order
- ?? Cost categories by labor, material, equipment, sub-con. and others for activity based costing
- ?? Itemized budget, purchase, costing and variance measurement
- ?? Project profit & loss report directly integrated to company overheads
